

THE H.E.L.P. SYSTEM

HELIPORT EMERGENCY LANDING PACK

The H.E.L.P. System - Heliport Emergency Landing Pack is an extremely portable, passive-lighting system. **The H.E.L.P. System** is comprised of five (5) high intensity - H.I. Retro-reflective - RL Edge Markers - Model 336-2, designed for emergency night operations, requiring immediate deployment. **The H.E.L.P. System** is supplied in a rigid carrying case, so compact that this case can be transported inside the helicopter or even in the trunk of a car.

The Model 336-2 RL markers operate by reflecting the light from the approaching helicopter's landing light, giving the Model 336-2 RL marker a visibility range of 3 - 4 NM+ even at extreme approach angles. With no need for or dependency on electricity, cables or even an ON-OFF switch, **The H.E.L.P. System is always ON** and ready for use, giving the pilot complete control of the approach and landing, where ever and when ever called upon.

The H.E.L.P. System's unique, patented design ensures that complete installation takes only minutes. In emergency situations where seconds count **The H.E.L.P. System** will provide a safe, cost effective and reliable helicopter night time landing zone, time after time, year after year.
